

# Protected business WebGuard

WebGuard suite of products is geared to provide businesses with flexible, customizable, and intuitive web protection.

WebGuard services inspect, filter and clean inbound and outbound web traffic to combat all browser-based threats. These solutions are focused on protecting the end user who is accessing internet resources. Companies subscribe to these plug-and-play services which provide advanced web security functionality in-the-cloud. It is the only true, purpose-built cloud computing web security solution available as a managed service in South Africa.

## Benefits:

- Integrated web security and traffic interrogation WebGuard Advanced is a robust web security service that helps companies control users' access to internet resources and protect the company network against browser-based threats such as bots, phishing, and other malicious active content.
- Its integrated and comprehensive functionality provides security and control for all users, across any device (including mobile devices), at any location, without requiring multiple point products to protect different gateways.
- Full spectrum web security and traffic interrogation WebGuard Premium is an advanced, agile and highly-customizable plug-and-play Web Security Service that delivers Unified Threat Management (UTM) functionality.
- It ensures complete control over users' access to internet resources and protects the company network against browser-based threats such as bots, phishing, and other malicious active content.
- It is built on world-leading technologies from trusted partners, combining firewall, anti-virus and anti-spyware protection with new generation features like dynamic URL classifications, application control, data loss prevention and authentication in a unified solution.

## Features:

### Advanced:

- AD/LDAP integration for authentication
- Dynamic website filtering via URL categorization
- Traditional whitelists and blacklists
- Web content filtering
- Safe Search
- DLP signatures
- Scheduled reports via email
- Online portal for reporting and policy management

### Premium:

- Encompasses all the features of WebGuard Advanced Provides thorough interrogation of all inbound and outbound web traffic
- Protects against existing, new and emerging browser-based threats
- Offers traditional whitelists and blacklists
- Allows for the decryption of SSL traffic to detect and block hidden malicious content, outgoing sensitive information or data leaks
- Includes capabilities for managing Web 2.0 access rather than simply blocking or restricting access
- Covers all access and entry points (gateways) including mobile devices
- Detects and blocks peer-to-peer traffic (P2P) which has the potential to consume large amounts of bandwidth and create security and liability risks
- Enriches the end user experience

## Support

Liquid Telecom has physical presence in several African countries, giving you access to people on the ground who understand your market and needs.
