

Protected business Mail Archiving

Mail Archiving is completely “touch-less” to your infrastructure. Journaling is simply enabled on the email system and copies of email communication are sucked into the cloud where they are stored securely for ten years. The solution provides complete and reliable real-time backup of all electronic communication in a central archive that is equal to housing a fully-redundant system for email archiving and retrieval, but without the high cost.

Benefits:

- Delivered as a managed service
- Offered on a subscription basis
- Hosted in the cloud
- Secure online management portal for IT administrators
- User-friendly portal for end-users to access, retrieve and send emails
- Central archive of electronic communication
- Easy access to information contained in email messages
- Varying security access levels

Features:

- Easily and efficiently manage email lifecycle.
- Central archive of all email communication for ten years.
- The archive is housed off-site, at a secure data centre.
- Fully-hosted and managed in the cloud at a secure data centre.
- It is completely “touch-less” to your infrastructure.
- Journaling is simply enabled on the email system.
- Provides complete and reliable real-time backup of all electronic communication in a central archive that is equal to housing a fully-redundant system for email archiving and retrieval, but without the high cost.
- An interactive search interface allows end-users to quickly and easily search their personal archive directly from any browser to locate the messages they need;
- Cut down on help desk queries
- Improve productivity.
